# Subtopic

---

## 4.1 Basic K-MAP

---

## 4.2 K-MAP Implementation

The slide features several large, overlapping geometric shapes in teal, yellow, and green, primarily located in the top right and bottom left corners. These shapes are composed of various polygons, including triangles and diamonds, creating a modern, abstract background.

“

## 4.1 Basic K-MAP

# 4.1 Basic K-MAP

---

- K-Map stands for Karnaugh Map, it is developed by Karnaugh in 1953
- Used to simplify Boolean algebraic expression without having to use Boolean algebra theorems and Laws
- It use pictorial method to solve the Boolean expression

# 4.1 Basic K-MAP

Example of K-MAP

$$\text{Out} = \bar{A}\bar{B}CD + \bar{A}BCD + ABCD + A\bar{B}CD + AB\bar{C}\bar{D} + AB\bar{C}D + ABC\bar{D}$$

A \ B		CD			
		00	01	11	10
00				1	
01				1	
11	1	1	1	1	
10	1			1	

$$\text{Out} = AB + CD$$

“

## 4.2 K-MAP Implementation

## 4.2 K-MAP Implementation

### 2 Variable K-MAP

- Number of cells =  $2^n$   
where  $n$  = number of variable
- For 2 variable k-map, the number of cells is  $2^2 = 4$
- Put “1” in the represented cell

## 4.2 K-MAP Implementation

### 3 Variable K-MAP

Can be represented horizontally or vertically

For 3 variable k-map, the number of cells is  $2^3 = 8$

## 4.2 K-MAP Implementation

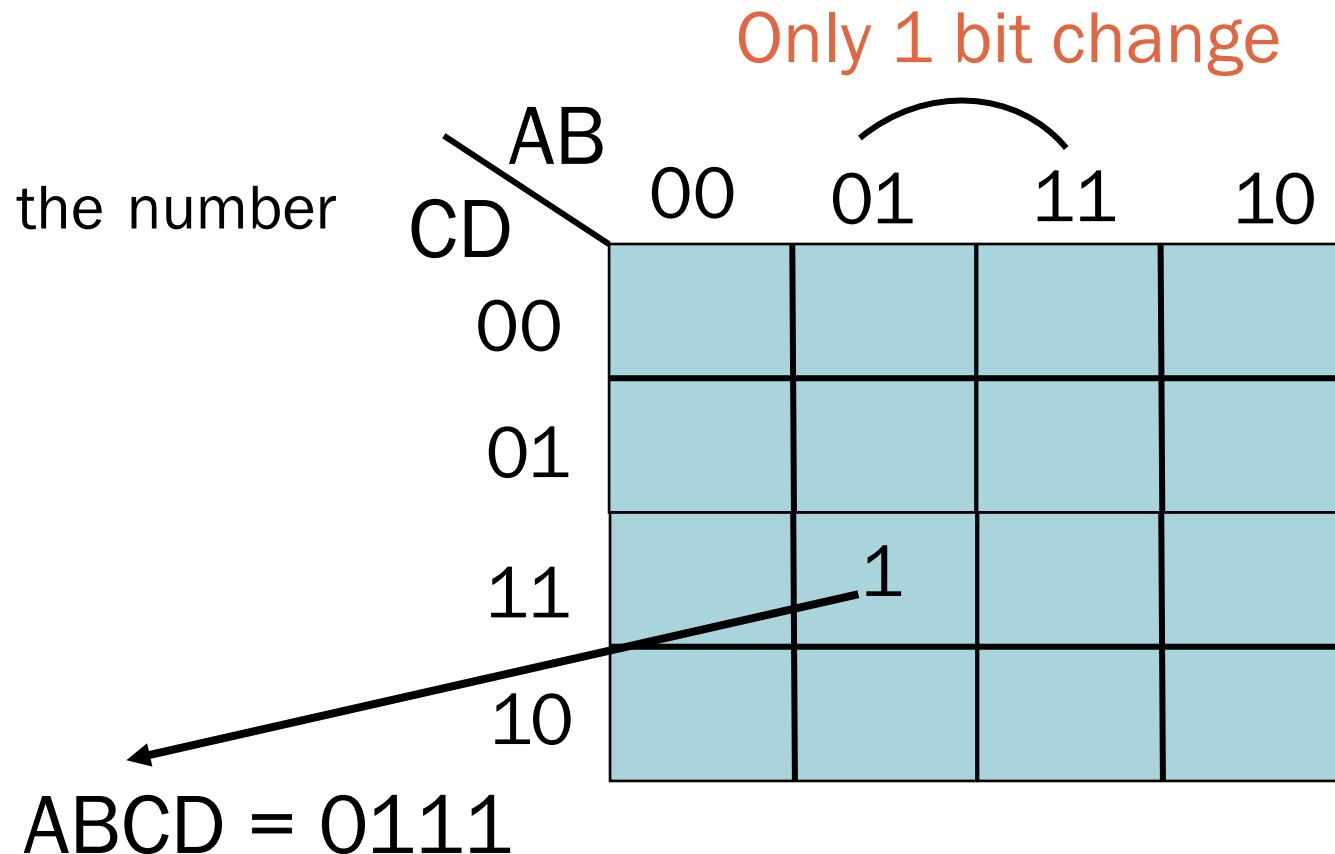

Another representation  
on K-Map with 3  
Variable

A	BC	
	0	1
00		
01		
11		
10		

## 4.2 K-MAP Implementation

### 4 Variable K-MAP

For 4 variable k-map, the number of cells is  $2^4 = 16$

## 4.2 K-MAP Implementation

Representation using K-MAP

Output :  $A'B'C'D + A'B'C'D + A'B'CD$

AB \ CD		00	01	11	10
CD	00	1			
	01	1			
	11	1			
	10				

## 4.2 K-MAP Implementation

---

### Rules for K-MAP Simplification (For SOP Expression)

- Groups may not contain 0 (in POS groups may not contain 1)
- We can group 1,2,4,8, or  $2^n$  cells
- Each group should be as large as possible
- Cells containing 1 must be grouped
- Groups may overlap
- Opposite grouping and corner grouping is allowed
- There should be as few groups as possible

## 4.2 K-MAP Implementation

Example

The expression is  
 $= A + A'C + A'B'C'D'$

## 4.2 K-MAP Implementation

Example.

$$A'B' + A'C'D'$$

## 4.2 K-MAP Implementation

Example corner grouping

AB \ CD		00	01	11	10
CD	00	1			1
	01				
	11				
	10	1			1

$B'D'$

## 4.2 K-MAP Implementation

Example opposite grouping

AB \ CD		AB			
		00	01	11	10
CD	00	1			1
	01	1			1
	11	1			1
	10	1			1

B'

## 4.2 K-MAP Implementation

Example.

In the sum of products function  $f(x, y, z) = \sum m(2,3,4,5)$ , find the prime implicants

## 4.2 K-MAP Implementation

Example.

K-MAP for Boolean example is attached. Find the number of essential prime implicants

Number of prime implicants = 4

		AB			
		00	01	11	10
CD	00	1	1	0	1
	01	0	0	0	1
	11	1	0	0	0
	10	1	0	0	1

## 4.2 K-MAP Implementation

Example.

Find the minimized form of

$$A'B'C' + A'BC' + A'BC + ABC'$$

000      010      011      110

$$= A'C' + A'B + BC'$$

## 4.2 K-MAP Implementation

### Don't Care

- A don't care cell can be represented by a cross (X) or minus (-)
- We can consider a don't care cell as 1 or 0

Don't care cell

X \ YZ	00	01	11	10
0	X			1
1	1	1		

## 4.2 K-MAP Implementation

Example.

Find the number of product terms in the minimized sum of product (SOP) expression obtained through the following K-MAP → 2

		AB			
		00	01	11	10
CD	00	1	0	0	1
	01	0	x	0	0
	11	0	0	x	1
	10	1	0	0	1

## 4.2 K-MAP Implementation

---

Example.

Minimize the following Boolean expression using K-MAP

$$Y = A'B'C'D + A'BCD' + AB'C'D + ABC'D'$$

## 4.2 K-MAP Implementation

There are 3 prime implicants

Therefore, the answer is

$$Y = A'BCD' + ABC'D' + B'C'D$$

## 4.2 K-MAP Implementation

### Example for Product of Sum

Find the Boolean expression for the given truth table

A	B	C	OUTPUT
0	0	0	0
0	0	1	0
0	1	0	0
0	1	1	1
1	0	0	0
1	0	1	0
1	1	0	1
1	1	1	0

## 4.2 K-MAP Implementation

In POS consider 0  
(instead of 1)

$$\rightarrow B(A' + C')(A + C)$$

## 4.2 K-MAP Implementation

### 5 Variable K-MAP

- For 5 variable, we use 2 adjacent K-maps
- Example for ABCDE variable

		$\bar{A}$			
		00	01	11	10
BC	00	0	1	3	2
	01	4	5	7	6
	11	12	13	15	14
	10	8	9	11	10

		A			
		00	01	11	10
BC	00	16	17	19	18
	01	20	21	23	22
	11	28	29	31	30
	10	24	25	27	26

## 4.2 K-MAP Implementation

- It can also be represented as the following K-MAP

$A = 0$

BC \ DE	00	01	11	10
00	$B'C'D'E'$ <sup>0</sup>	$B'C'D'E$ <sup>1</sup>	$B'C'DE$ <sup>3</sup>	$B'C'DE'$ <sup>2</sup>
01	$B'CD'E'$ <sup>4</sup>	$B'CD'E$ <sup>5</sup>	$B'CDE$ <sup>7</sup>	$B'CDE'$ <sup>6</sup>
11	$BCD'E'$ <sup>12</sup>	$BCD'E$ <sup>13</sup>	$BCDE$ <sup>15</sup>	$BCDE'$ <sup>14</sup>
10	$BC'D'E'$ <sup>8</sup>	$BC'D'E$ <sup>9</sup>	$BC'DE$ <sup>11</sup>	$BC'DE'$ <sup>10</sup>

$A = 1$

BC \ DE	00	01	11	10
00	$B'C'D'E'$ <sup>16</sup>	$B'C'D'E$ <sup>17</sup>	$B'C'DE$ <sup>19</sup>	$B'C'DE'$ <sup>18</sup>
01	$B'CD'E'$ <sup>20</sup>	$B'CD'E$ <sup>21</sup>	$B'CDE$ <sup>23</sup>	$B'CDE'$ <sup>22</sup>
11	$BCD'E'$ <sup>28</sup>	$BCD'E$ <sup>29</sup>	$BCDE$ <sup>31</sup>	$BCDE'$ <sup>30</sup>
10	$BC'D'E'$ <sup>24</sup>	$BC'D'E$ <sup>25</sup>	$BC'DE$ <sup>27</sup>	$BC'DE'$ <sup>26</sup>

## 4.2 K-MAP Implementation

Example.

Simplify  $F(A, B, C, D, E) = \sum m (0, 5, 6, 8, 9, 10, 11, 16, 20, 42, 25, 26, 27)$
